Looking for instant traffic? Interested in targeting your potential customers with online ads set to only appear at a certain time for a specific geographic location? Get instant traffic online with a Pay Per Click advertising campaign!

What is PPC?

Pay per click (PPC) advertising is a type of online advertising where you only pay when somebody clicks on your ads. It is an Internet advertising model you can use to get instant targeted traffic to your website through Google AdWords or the Yahoo! Bing Network.

People find products and services they are looking for in search engines by typing search terms or keywords. When the target keywords on your PPC campaign are typed by users on search engines, your ads appear on top, below, or alongside organic search results. The position of your ads against your competitors will depend on how much you are bidding for your target keywords and your quality score. Depending on the campaign settings, your ads may also appear on various sites that are part of the Google, Bing and Yahoo! networks. There are many options to target your customers—some of the targeting options are by device, location, language, scheduling, and keyword matching. When they click on any of your ads, they are directed to a landing page on your website where you can convert them to leads or customers via an inquiry, contact form, or 'buy now' buttons.

Why Employ PPC Advertising?

PPC advertising is the fastest way to drive instant traffic to your website. PPC advertising is especially useful for direct response campaigns where instant and direct action is desired from target customers. This scenario also allows for cost-per-click to be measured immediately against conversions or sales to determine ROI.

PPC is also effective in kick-starting and regulating traffic volumes particularly during times when businesses are launching a new product or service, need to fill an empty sales pipeline, during limited sales season, or when carrying time-sensitive promotions.

PPC can be utilized to surge traffic or to acquire huge customers while demand is high. Unlike SEO, which can take time to build rankings, PPC immediately establishes an online presence, requires no real build-up time, and generates ROI much more quickly when done right

When systematic split testing and optimization are done on a PPC campaign, cost per click goes down and traffic translates to conversions at a higher rate.

You Only Pay for Clicks

With other forms of advertising – billboard, print, TV or radio – you get a wide reach but risk having no one actually visiting your website. With PPC, you only pay when someone actually clicks on your ads which means that a campaign sending you only a small amount of traffic will cost you a very little amount of money vs. a campaign sending you a lot of traffic which would cost you more money. In short, with PPC you get what you pay for.

Traffic is Targeted

When you use PPC, your ads will be placed on search engine results pages based on the keywords typed by search engine users. You choose the keywords that will trigger your ads to appear—keywords which you think your customers will use when searching for a product or service you offer. Keyword research and suggestion tools are also available to get insights on what people are actually searching for in your category. In addition, PPC is proven to present numerous targeting advantages decreasing the percentage of users clicking on ads who are not likely to be interested in your product or service.

You Have Control of Budget and Scheduling

With PPC, you can set a maximum budget on a daily or monthly basis. This allows for some flexibility, either when you just want to test a campaign, test new keywords, or massively increase the size of your campaign because the ROI has proven itself. You may also effectively schedule your ads to appear based on what you think the days of the week or time of day your target market is searching for a product or service you offer.

Fast, Measurable Results

Every keyword that triggered your ads to be displayed (impressions) and every click or click through rate (CTR) and the cost per click for every keyword (CPC) is tracked and measured. Conversions can also be tracked when they make a phone call, when they sign up to your newsletter or fulfill an order form and make a payment. Since results can be measured daily, weekly or monthly, this allows for systematic optimization.
